Description

Protein BTG3 (BTG Anti-Proliferation Factor 3) is a member of the BTG/Tob family. This family has structurally related proteins that appear to have antiproliferative properties. Protein BTG3 might play a role in neurogenesis in the central nervous system. Among its related pathways are deadenylation-dependent mRNA decay. Overexpression of BTG3 impairs serum-induced cell cycle progression from the G0/G1 to S phase.
