30-1571: Anti-CD222 / IGF2 receptor / CIMPR Monoclonal Antibody (Clone:MEM-240)

Clonality: Monoclonal **Clone Name:** MEM-240 Application: FACS, IP, WB Reactivity: Human Gene: IGF2R Gene ID: 3482 **Uniprot ID:** P11717 **Purified** Format: **Alternative Name:** IGF2R,MPRI

Immunogen Information: Recombinant Vaccinia virus encoding CD222.

Mouse IgG1

Description

Isotype:

CD222 (CIMPR, cation-independent mannose 6-phosphate receptor; IGF2 receptor) is a ubiquitously expressed 250 kDa transmembrane protein. No more than 10% of CD222 is present on the cell surface where it serves as a multifunctional receptor. Intracellular (major) fraction of CD222 is involved in transport of newly synthesized lysosomal enzymes modified by mannose 6-phosphate from Golgi apparatus to lysosomes. The cell surface CD222 binds and internalizes exogeneous mannose 6-phosphate-containing ligands. Importantly, CD222 is crutial for internalization and degradation of insulin-like growth factor 2, thus controling cell growth. CD222 also complexes CD87 (urokinase-type plasminogen-activator receptor), plasminogen and latent TGF-beta, last but not least CD222 serves as a receptor for heparanase and even for Listeria.

Product Info

Amount: 0.1 mg

Purification : Purified from cell culture supernatant by protein-A affinity chromatography.

Storage condition : Store at 2-8°C. Do not freeze.
