## 30-1204: Anti-IgM Monoclonal Antibody (Clone:CH2)

| Clonality :                                 | Monoclonal                       |
|---|----------------------------------|
| Clone Name :                                | CH2                              |
| Application :                               | WB, FACS, ICC, ELISA             |
| Reactivity :                                | Human                            |
| Gene :                                      | IGHM                             |
| Uniprot ID :                                | P01871                           |
| Format :                                    | Purified                         |
| Alternative Name :                          | Immunoglobulin heavy constant mu |
| Isotype :                                   | Mouse IgG1                       |
| Immunogen Information : Purified human IgM. |                                  |

### **Description**

Immunoglobulin M (IgM) is produced as a 900 kDa pentamer, which is an efficient complement binder. This antibody type is produced initially in the immune response and it is the first immunoglobulin class to be synthesized by a fetus or newborn. IgM antibodies do not cross the placenta. IgM concentration in blood is 0.12 g/l and its biological survival (plasma T1/2) is 5 days.

### **Product Info**

| Amount :            | 0.1 mg                                       |
|---------------------|--|
| Purification :      | Purified by precipitation and chromatography |
| Storage condition : | Store at 2-8°C. Do not freeze.               |

### **Application Note**

Western Blotting Flow Cytometry Recommended dilution: 1 Ã[µg/ml Immunocytochemistry ELISA
