30-1102: Anti-Mycobacterium tuberculosis antigen GlcB Polyclonal Antibody

Clonality :	Polyclonal
Application :	WB, ELISA
Reactivity :	Mycobacterium tuberculosis
Format :	Purified
Isotype :	Rabbit IgG
Immunogen Information : Recombinant Mycobacterium tuberculosis GlcB produced in E. coli	

Description

The Mycobacterium tuberculosis antigen GlcB (malate synthase) catalyzes synthesis of malate from glyoxylate and acetyl-CoA. This reaction is part of the glyoxylate cycle, which allows the bacterium to derive its carbon requirements from twocarbon compounds by bypassing the two carbocylation steps of the cytric acid cycle. This enzyme is up-regulated in response to phagocytosis and it is a virulence or persistence factor.

Product Info

Amount :	0.1 mg
Purification :	Purified from rabbit serum by affinity chromatography
Storage condition :	Store at 2-8°C. Do not freeze.
