

32-20001: Recombinant Aeromonas Aminopeptidase(Discontinued)

Description

Source: E.coli

Proteases (also called Proteolytic Enzymes, Peptidases, or Proteinases) are enzymes that hydrolyze the amide bonds within proteins or peptides. Most proteases act in a specific manner, hydrolyzing bonds at, or adjacent to specific residues, or a specific sequence of residues contained within the substrate protein or peptide. Proteases play an important role in most diseases and biological processes, including prenatal and postnatal development, reproduction, signal transduction, the immune response, various autoimmune and degenerative diseases, and cancer. They are also an important research tool, frequently used in the analysis and production of proteins. Recombinant Aeromonas Aminopeptidase is a 31.4 kDa protein containing 291 amino acid residues.

Product Info

Amount : 100 µg / 500 µg

Purification : Purity: \geq 98% by SDS-PAGE gel and HPLC analyses.

Amino Acid : MPPITQQATV TAWLPQVDAS QITGTISLE SFTNRFYTTT SGAQASDWIA SEWQALSASL PNASVKQVSH
SGYNQKSVVM TITGSEAPDE WIVIGGHLDS TIGSHTNEQS VAPGADDASGIAAVTEVIR VLSENNFPK
RSIAFMAYAA EEVGLRGSQD LANQYKSEGK NVVSALQLDM TNYKGSQDV VFITDYTDSN FTQYLTLMD
EYLPSLTYGF DTCGYACSDH ASWHNAGYPAAMPFESKFND YNPRIHTTQD TLANSDPTGS HAKKFTQLGL
AYAIEMGSAT G

Application Note

Sequentially cleaves N-terminal amino acids except E, D, and X-P.
