

32-20026: Recombinant Human BD-2(Discontinued)

Alternative Name : DEFB2, DEFB4A, Beta-Defensin 2, Skin-antimicrobial peptide 1, SAP1

Description

Source: E.coli

Defensins (alpha and beta) are cationic peptides with a broad spectrum of antimicrobial activity that comprise an important arm of the innate immune system. The Alpha-defensins are distinguished from the Beta-defensins by the pairing of their three disulfide bonds. To date, six human Beta-defensins have been identified; BD-1, BD-2, BD-3, BD-4, BD-5 and BD-6. Beta-defensins are expressed on some leukocytes and at epithelial surfaces. In addition to their direct antimicrobial activities, they can act as chemoattractants towards immature dendritic cells and memory T cells. The Beta-defensin proteins are expressed as the C-terminal portion of precursors, and are released by proteolytic cleavage of a signal sequence and, in some cases, a propeptide sequence. Beta-defensins contain a six-cysteine motif that forms three intramolecular disulfide bonds. Recombinant Human BD-2 is a 4.3 kDa protein containing 41 amino acid residues.

Product Info

Amount : 5 µg / 20 µg

Purification : Purity: >= 98% by SDS-PAGE gel and HPLC analyses.

Amino Acid : GIGDPVTCLK SGAICHPVFC PRRYKQIGTC GLPGTKCCKK P

Application Note

Determined by its ability to chemoattract immature human dendritic cells using a concentration of 10.0-100.0 ng/ml.
