32-20036: Recombinant Human Betacellulin(Discontinued)

Reactivity: Human, Mouse

Alternative Name: BTC

Description

Source:E.coliBetacellulin is an EGF-related polypeptide growth factor that signals through the EGF receptor. It is produced in several tissues, including the pancreas, small intestine, and in certain tumor cells. Betacellulin is a potent mitogen for retinal pigment epithelial cells and vascular smooth muscle cells. Human betacellulin is initially synthesized as a glycosylated 32.0 kDa transmembrane precursor protein, which is processed by proteolytic cleavage to produce the mature sequence. Recombinant Human Betacellulin is a 9.0 kDa monomeric protein, containing 80 amino acid residues, which comprises the mature EGF-homologous portion of the Betacellulin protein.

Product Info

Amount: $5 \mu g / 20 \mu g$

Purification: Purity: >= 98% by SDS-PAGE gel and HPLC analyses. **Content:** This recombinant protein is supplied in lyophilized form.

Amino Acid: DGNSTRSPET NGLLCGDPEE NCAATTTQSK RKGHFSRCPK QYKHYCIKGR CRFVVAEQTP SCVCDEGYIG

ARCERVDLFY

Application Note

TheÃ \Box ED₅₀Ã \Box was determined by the dose-dependent stimulation of the proliferation of murine Balb/3T3 cells is <= 0.05 ng/ml, corresponding to a specific activity of >= 2 x 10⁷ units/mg.
