

## 32-20080: Recombinant Human Epigen(Discontinued)

**Reactivity :** Mouse

**Alternative Name :** EPG, Epithelial mitogen

### Description

**Source:** **E.coli** Epigen is an EGF-related polypeptide growth factor that signals through the ErbB receptor-1. It is produced in several tissues, including the testis, liver, and heart, as well as in certain tumor cells. Epigen is mitogenic for fibroblasts and epithelial cells. Human Epigen is initially synthesized as a glycosylated 14.7 kDa transmembrane precursor protein, which is processed by proteolytic cleavage to produce a mature soluble sequence. Recombinant Human Epigen is a 7.9 kDa monomeric protein, containing 72 amino acid residues, which comprises the EGF-homologous portion of the Epigen precursor.

### Product Info

**Amount :** 5 µg / 25 µg

**Purification :** Purity:  $\geq 98\%$  by SDS-PAGE gel and HPLC analyses.

**Content :** This recombinant protein is supplied in lyophilized form.

**Amino Acid :** AVTVTPPITA QQADNIEGPI ALKFSHLCLE DHNSYINGA CAFHHELEKA ICRCFTGYTG ERCEHLTLTS YA

### Application Note

Determined by the dose-dependent stimulation of the proliferation of murine Balb/3T3 cells. The expected  $ED_{50}$  for this effect is 150-300 ng/ml.
