

32-20114: Animal-Free Recombinant Human FGF-19(Discontinued)

Alternative Name : Fibroblast Growth Factor-19, FGFJ

Description

Source: E.coli The FGF family plays central roles during prenatal development and postnatal growth and regeneration of a variety of tissues, by promoting cellular proliferation and differentiation. FGF-19, a member of the FGF family, is a high-affinity heparin dependent ligand for FGFR4. FGF-19 is expressed during brain development and embryogenesis. Recombinant Human FGF-19 is a 21.8 kDa protein containing 195 amino acid residues.
