32-20173: Animal-Free Recombinant Human IFN-Beta (Discontinued)

Description

Source:E.coliProteins of this family play an important role in inducing non-specific resistance against a broad range of viral infections. They also affect cell proliferation and modulate immune responses. Produced by peripheral blood leukocytes and lymphoblastoid cells, IFN-Alpha is an acid-stable molecule that signals through IFN-Alpha /Beta R, which is also used by IFN-Beta . Both IFNs have similar anti-viral activity and regulate expression of MHC class I antigens. IFN-Alpha contains four highly conserved cysteine residues that form two disulfide bonds, one of which is necessary for biological activity. The Recombinant Human IFN-Beta is a 20.0 kDa protein containing 166 amino acid residues.Â

Product Info

Amount: $5 \mu g / 20 \mu g$

Purification: Purity: >= 95% by SDS-PAGE gel and HPLC analyses. **Content:** This recombinant protein is supplied in lyophilized form.

Amino Acid: MSYNLLGFLQ RSSNFQCQKL LWQLNGRLEY CLKDRMNFDI PEEIKQLQQF QKEDAALTIY EMLQNIFAIF

RQDSSSTGWN ETIVENLLAN VYHQINHLKT VLEEKLEKED FTRGKLMSSL HLKRYYGRIL HYLKAKEYSH

CAWTIVRVEI LRNFYFINRL TGYLRN

Application Note

Determined by its ability to stimulate the proliferation of human TF-1 cells. The expected $\tilde{A} \cap \hat{A} = 0.25 \text{ ng/ml}$, corresponding to a specific activity of $>= 4 \times 10^6 \text{units/mg}$.
