

32-20348: Animal-Free Recombinant Murine IL-6(Discontinued)

Reactivity : Monkey, Mouse

Alternative Name : 26 kDa protein, IFN-Beta2, B cell differentiation factor (BCDF), BSF-2, HPGF, HSF, MGI-2

Description

Source: E.coli IL-6 is a pleiotropic cytokine that plays an important role in host defense by regulating immune and inflammatory responses. Produced by T cells, monocytes, fibroblasts, endothelial cells and keratinocytes, IL-6 has diverse biological functions. It stimulates B cell differentiation and antibody production, synergizes with IL-3 in megakaryocyte development and platelet production, induces expression of hepatic acute-phase proteins, and regulates bone metabolism. IL-6 signals through the IL-6 receptor system that consists of two chains, IL-6R α and gp130. Murine IL-6 is inactive on human cells, while both human and murine are equally active on murine cells. Recombinant Murine IL-6 is a 21.7 kDa protein containing 188 amino acid residues.
