32-20248: Recombinant Murine VEGF165(Discontinued)

Reactivity: Chicken, Human, Mouse, Rabbit, Rat

Alternative Name : Vascular Endothelial Growth Factor, Folliculostellate cell-derived growth factor, Glioma-derived endothelial cell mitogen, VEGF-A

Description

Source: E.coli

VEGF is a potent growth and angiogenic cytokine. It stimulates proliferation and survival of endothelial cells, and promotes angiogenesis and vascular permeability. Expressed in vascularized tissues, VEGF plays a prominent role in normal and pathological angiogenesis. Substantial evidence implicates VEGF in the induction of tumor metastasis and intra-ocular neovascular syndromes. VEGF signals through the three receptors; fms-like tyrosine kinase (flt-1), KDR gene product (the murine homolog of KDR is the flk-1 gene product) and the flt4 gene product. Recombinant murine VEGF is a 39.0 kDa disulfide-linked homodimeric protein consisting of two 165 amino acid polypeptide chains.

Product Info

Amount: $2 \mu g / 10 \mu g$

Purification: Purity: >= 98% by SDS-PAGE gel and HPLC analyses.

Amino Acid: MAPTTEGEOK SHEVIKFMDV YORSYCRPIE TLVDIFOEYP DEIEYIFKPS CVPLMRCAGC CNDEALECVP

TSESNITMOI MRIKPHOSOH IGEMSFLOHS RCECRPKKDR TKPEKHCEPC SERRKHLFVO DPOTCKCSCK

NTDSRCKARQ LELNERTCRC DKPRR

Application Note

Determined by the dose-dependent stimulation of the proliferation of human umbilical vein endothelial cells (HUVEC) using a concentration range of 1.0-5.0 ng/ml.
