## 32-20498: Recombinant Murine sRANK Ligand (E.coli derived)(Discontinued)

**Reactivity:** Human, Mouse, Rat

Alternative Name: soluble Receptor Activator of NF-kB Ligand, TNFSF11, TRANCE (TNF-related activation-induced

cytokine), OPGL, ODF (Osteoclast differentiation factor)

## **Description**

**Source:E.coli**RANKL and RANK are members of the TNF superfamily of ligands and receptors that play an important role in the regulation of specific immunity and bone turnover. RANK (receptor) was originally identified as a dendritic cell-membrane protein, which, by interacting with RANKL, augments the ability of dendritic cells. These dendritic cells then stimulate naÃ-ve T-cell proliferation in a mixed lymphocyte reaction, promote the survival of RANK+ T-cells, and regulate T-cell-dependent immune response. RANKL, which is expressed in a variety of cells, including osteoblasts, fibroblasts, activated T-cells and bone marrow stromal cells, is also capable of interacting with a decoy receptor called OPG. Binding of soluble OPG to sRANKL inhibits osteoclastogenesis by interrupting the signaling between stromal cells and osteoclastic progenitor cells, thereby leading to excess accumulation of bone and cartilage. Recombinant Murine sRANKL is a 19.4 kDa polypeptide comprising the TNF-homologous region of RANKL (174 amino acid residues).

## **Product Info**

Amount:  $2 \mu g / 10 \mu g$ 

**Purification:** Purity:>= 98% by SDS-PAGE gel and HPLC analyses. **Content:** This recombinant protein is supplied in lyophilized form.

Amino Acid: PAMMEGSWLD VAQRGKPEAQ PFAHLTINAA SIPSGSHKVT LSSWYHDRGW AKISNMTLSN

GKLRVNQDGF YYLYANICFR HHETSGSVPT DYLQLMVYVV KTSIKIPSSH NLMKGGSTKN WSGNSEFHFY

SINVGGFFKL RAGEEISIQV SNPSLLDPDQ DATYFGAFKV QDID

## **Application Note**

Determined by its dose-dependent ability to induce reporter gene in HT-29 NF-kB Luc reporter cells.
