## 32-20529: Recombinant Murine Beta -NGF(Discontinued)

**Reactivity:** Human, Mouse,

Alternative Name: NGF-Beta, beta-Nerve Growth Factor

## **Description**

**Source:E.coli**Beta -NGF is a neurotrophic factor structurally related to BDNF, NT-3 and NT-4. These proteins belong to the cysteine-knot family of growth factors that assume stable dimeric structures. Beta -NGF is a potent neurotrophic factor that signals through its receptor Beta -NGFR, and plays a crucial role in the development and preservation of the sensory and sympathetic nervous systems. Beta -NGF also acts as a growth and differentiation factor for B lymphocytes, and enhances B-cell survival. The functional form of Recombinant Murine Beta -NGF is a non-covalently-linked homodimer of two 13.4 kDa, polypeptide monomers that each contain 120 amino acids and three disulfide bonds, which are required for biological activity.
