

## 32-20577: Recombinant Human GASP-1(Discontinued)

**Alternative Name :** GDF-associated serum protein-1, GASP, KIAA0443, WFIKKNRP

### Description

#### Source:CHO cells

Growth and differentiation factor-associated serum protein-1 (GASP-1) is a secreted inhibitory TGF-Beta binding protein that contains multiple protease inhibitor structural domains. It is expressed primarily in the ovary, testis, and brain, and can act as a potent soluble inhibitor of myostatin and GDF-11, but not Activin A. The GASP-1 gene encodes a 571 amino acid protein that contains a 29 amino acid secretion signal sequence, and multiple identifiable structural features, including a WAP domain, a follistatin/Kazal domain, an immunoglobulin domain, two tandem Kunitz domains, and a netrin domain. Recombinant Human GASP-1 is a 542 amino acid protein that migrates at an apparent molecular weight of approximately 55-66 kDa by SDS-PAGE analysis under non-reducing conditions. The calculated molecular weight of Recombinant Human GASP-1 is 59.9 kDa.

### Product Info

**Amount :** 5 µg / 25 µg

**Purification :** Purity:>= 95% by SDS-PAGE gel and HPLC analyses.

**Content :** This recombinant protein is supplied in lyophilized form.

**Amino Acid :** LPPIRYSHAG ICPNDMNPNL WVDAQSTCRR ECETDQECET YEKCCPNVCG TKSCVAARYM

### Application Note

Determined by its ability to inhibit human Myostatin (GDF-8) activity in MCP-11 cells. The  $ED_{50}$  for this effect is 0.0025-0.0040 µg/ml in the presence of 5ng/ml of human Myostatin (GDF-8).
