

37-1077: Human CD31 / PECAM1 Recombinant Protein (His Tag)(Discontinued)

Reactivity : Human
Alternative Name : CD31 Protein, CD31/EndoCAM Protein, endoCAM Protein, GPIIA' Protein, PECA1 Protein, PECAM-1 Protein,

Description

Source : HEK293 Cells

The Cluster of Differentiation 31 (CD31) adhesion molecule, also known as platelet-endothelial cell adhesion molecule-1 (PECAM-1), is the only known member of the CAM family on platelets. CD31 protein is a 13-kDa transmembrane glycoprotein expressed by endothelial cells, platelets, monocytes, neutrophils, and certain T cell subsets. CD31 protein is also expressed in certain tumors, including epithelioid hemangioendothelioma, other vascular tumors, and histiocytic malignancies. CD31 plays a key role in removing aged neutrophils and tissue regeneration. CD31 protein mediates the homotypic or heterotypic cell adhesion by binding to itself or the leukocyte integrin alphavbeta3, and thus plays a role in neutrophil recruitment in inflammatory responses, transendothelial migration of leukocytes, as well as in cardiovascular development.

Product Info

Amount : Human CD31 / PECAM1 Recombinant Protein (His Tag)(Discontinued) / 200 µg
Purification : > 97 % as determined by SDS-PAGE
Content : Formulation Lyophilized from sterile PBS, pH 7.4
Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization.
Storage condition : Store it under sterile conditions at -20°C to -80°C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Amino Acid : Met1-Lys601

Application Note

Measured by the ability of the immobilized protein to support the adhesion of Jurkat human acute T cell leukemia cells. When 8x10⁴ cells/well are added to CD31-His coated plates (5µg/mL, 100 µL/well) in the presence of 10 µg/mL PHA, approximately >70% will adhere after 30 minutes at 37°C.

Endotoxin :< 1.0 EU per µg of the protein as determined by the LAL method
