## 36-2448: Anti-Glycophorin A / CD235a (Erythrocyte Marker) Polyclonal Antibody

| Clonality : | Polyclonal |
| :--- | :--- |
| Clone Name : | N/A |
| Application : | WB,IHC |
| Reactivity : | Human |
| Gene: | GYPA |
| Gene ID : | $2993 ; 2994$ |
| Uniprot ID : | P02724 |
| Alternative Name : | Blood group--MN locus; GPA; GPErik; GpMilll; GPSAT; GYPA; MN sialoglycoprotein; MNS; PAS2; |
| Isotype : | Sialoglycoprotein alpha |
| Immunogen Information : Recombinant human glycophorin A protein |  |

## Description

Recognizes a sialoglycoprotein of 39 kDa , identified as glycophorin A (GPA). It is present on red blood cells (RBC) and erythroid precursor cells. It has been shown that glycophorin acts as the receptor for Sandei virus and parvovirus. Glycophorins A (GPA) and B (GPB), which are single, trans-membrane sialoglycoproteins. GPA is the carrier of blood group M and $N$ specificities, while GPB accounts for $S$ and $U$ specificities. GPA and GPB provide the cells with a large mucin like surface and it has been sẤrggested this provides a barrier to cell fusion, so minimizing aggregation between red blood cells in the circulation.

## Product Info

| Amount : | $20 \mu \mathrm{~g} / 100 \mu \mathrm{~g}$ |
| :--- | :--- |
| Content : | $200 \mu \mathrm{~g} / \mathrm{ml}$ of Ab Purified by Protein A. Prepared in 10 mM PBS with $0.05 \% \mathrm{BSA} \& 0.05 \%$ azide. |
|  | Also available WITHOUT BSA \& azide at $1.0 \mathrm{mg} / \mathrm{ml}$. |
| Storage condition : | Antibody with azide - store at 2 to $8^{\circ} \mathrm{C}$. Antibody without azide - store at -20 to $-80^{\circ} \mathrm{C}$. Antibody <br> is stable for 24 months. Non-hazardous. |

## Application Note

Western Blot (1-2ug/ml); Immunohistochemistry (Formalin-fixed) (1-2ug/ml for 30 minutes at RT)(Staining of formalin-fixed tissues requires heating tissue sections in 10 mM Tris with 1 mM EDTA, pH 9.0 , for 45 min at $95 \& \mathrm{deg} \mathrm{C}$ followed by cooling at RT for 20 minutes);
