## 36-2797: Anti-MMP9 (Matrix Metalloproteinase 9) Monoclonal Antibody(Clone: SPM425)

Clonality: Monoclonal Clone Name: SPM425 Application: IHC Reactivity: Human Gene: MMP9 Gene ID: 4318 **Uniprot ID:** P14780

82kDa matrix metalloproteinase-9; 92kDa gelatinase; 92kDa type IV collagenase; CLG 4B;

CLG4B; Collagenase Type 4 beta; Collagenase type IV 92KD; Gelatinase 92KD; Gelatinase B;

**Alternative Name:** Gelatinase beta; GelatinaseB; GELB; Macrophage gelatinase; MANDP2; Matrix

metallopeptidase 9 (gelatinase B, 92kDa gelatinase, 92kDa type IV collagenase); Matrix

Metalloproteinase 9; MMP9; Type V collagenase

Isotype: Mouse IgG2b, kappa

Recombinant human MMP9 protein fragment (around aa 22-166) (exact sequence is Immunogen Information:

proprietary)

## **Description**

The matrix metalloproteinases (MMP) are a family of peptidase enzymes responsible for the degradation of extracellular matrix components, including collagen, gelatin, fibronectin, laminin and proteoglycan. Transcription of MMP genes is differentially activated by phorbol ester, lipopolysaccharide (LPS) or staphylococcal enterotoxin B (SEB). MMP catalysis requires both calcium and zinc. MMP-9 (also designated 92 kDa type IV collagenase or gelatinase B) has been shown to degrade bone collagens in concert with MMP-1 (also designated interstitial collagenase, fibroblast collagenase or collagenase-1), and cysteine proteases and may play a role in bone osteoclastic resorption. MMP-1 is down-regulated by p53, and abnormality of p53 expression may contribute to joint degradation in rheumatoid arthritis by regulating MMP-1 expression.

## **Product Info**

Amount: 20 μg / 100 μg

200 µg/ml of Ab Purified by Protein A. Prepared in 10mM PBS with 0.05% BSA & 0.05% azide. Content:

Also available WITHOUT BSA & azide at 1.0mg/ml.

Antibody with azide - store at 2 to 8°C. Antibody without azide - store at -20 to -80°C. Antibody Storage condition:

is stable for 24 months. Non-hazardous.

## **Application Note**

Immunohistochemistry (Formalin-fixed) (1-2ug/ml for 30 minutes at RT)(Staining of formalin-fixed tissues requires heating tissue sections in 10mM Tris with 1mM EDTA, pH 9.0, for 45 min at 95&deqC followed by cooling at RT for 20 minutes);
