36-3154: Anti-gp100 / Melanosome / PMEL17 / SILV (Melanoma Marker) Monoclonal Antibody(Clone: PMEL/2037)

Clonality: Monoclonal
Clone Name: PMEL/2037
Application: ELISA,WB,IHC
Reactivity: Human

Reactivity: Human
Gene: SILV
Gene ID: 6490
Uniprot ID: P40967

95kDa melanocyte-specific secreted glycoprotein, M-beta; Melanocyte lineage specific antigen

Alternative Name:

GP100; Melanocyte protein Pmel 17; Melanoma associated ME20 antigen; Melanosomal matrix

protein17; Premelanosome protein (PMEL17); Secreted melanoma-associated ME20 antigen;

SILV; Silver homolog

Isotype: Mouse IgG1, kappa

Immunogen Information: A recombinant fragment (around aa 376-502) of human SILV protein (exact sequence is

proprietary)

Description

Cytotoxic T lymphocytes (CTL s) recognize melanoma-associated antigens, which belong to three main groups. These groups include tumor-associated testis-specific antigens, melanocyte differentiation antigens and mutated or aberrantly expressed antigens, which are routinely used as markers to identify melanomas based on their binding to specific monoclonal antibodies. gp100, also designated ME20-M, ME20-S and PMEL 17, is classified as a melanocyte differentiation antigen and is expressed at low levels in normal cell lines and tissues, but is upregulated in melanocytes. gp100 is a highly glycosylated protein. It is also the product of proteolytic cleavage, which results in a secreted protein.

Product Info

Amount: 20 μg / 100 μg

Content: 200 µg/ml of Ab Purified from bioreactor concentrate by Protein A/G. Prepared in 10mM PBS

with 0.05% BSA & 0.05% azide. Also available WITHOUT BSA & azide at 1.0mg/ml.

Storage condition : Antibody with azide - store at 2 to 8°C. Antibody without azide - store at -20 to -80°C. Antibody

is stable for 24 months. Non-hazardous.

Application Note

ELISA (Use Ab at 2-4ug/ml for coating) (Order Ab without BSA); Western Blot (2-4ug/ml); Immunohistochemistry (Formalinfixed) (1-2ug/ml for 30 minutes at RT),(Staining of formalin-fixed tissues requires heating tissue sections in 10mM Tris with 1mM EDTA, pH 9.0, for 45 min at 95°C followed by cooling at RT for 20 minutes);

Fig. 4: Analysis of Protein Array containing more than 19,000 full-length human proteins using PMEL/gp100 Mouse Monoclonal Antibody (PMEL/2037). Z- and S-Score: The Z-score represents the strength of a signal that a monoclonal antibody (MAb) (in combination with a fluorescently-tagged anti-lgG secondary antibody) produces when binding to a particular protein on the HuProtTM array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProtTM are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. S-score therefore represents the relative target specificity of a MAb to its intended target. A MAb is considered to specific to its intended target, if the MAb has an S-score of at least 2.5. For example, if a MAb binds to protein X with a Z-score of 43 and to protein Y with a Z-score of 14, then the S-score for the binding of that MAb to protein X is equal to 29.
