32-6289: SARS-CoV-2 Spike Glycoprotein-S2

Alternative Name : nCoV-S2

Description

Source : Sf9, Baculovirus Cells.
The Sf9 derived recombinant protein contains the Coronavirus 2019 CoV-2 Spike Glycoprotein S2, Wuhan-Hu-1 strain, 685-1211 amino acids, having a Mw of 60.1 kDa and fused to 6xHis tag at C-terminal.

A human infecting coronavirus (viral pneumonia) called 2019 novel coronavirus, 2019-nCoV was found in the fish market at the city of Wuhan, Hubei province of China on December 2019.The 2019-nCoV shares an 87% identity to the 2 bat-derived severe acute respiratory syndrome 2018 SARS-CoV-2 located in Zhoushan of eastern China. 2019-nCoV has an analogous receptor-BD-structure to that of 2018 SARS-CoV, even though there is a.a. diversity so thus the 2019-nCoV might bind to ACE2 receptor protein (angiotensin-converting enzyme 2) in humans. While bats are possibly the host of 2019-nCoV, researchers suspect that animal from the ocean sold at the seafood market was an intermediate host. RSCU analysis proposes that the 2019-nCoV is a recombinant within the viral spike glycoprotein between the bat coronavirus and an unknown coronavirus.

Product Info

Amount :	50 µg / 150 µg
Purification :	Protein is >85% pure as determined SDS-PAGE.
Content :	nCoV-S2 protein solution is supplied in DPBS.
Storage condition :	Protein is shipped on ice packs. Upon arrival, Store at -20°C.
Amino Acid :	The Sf9 derived recombinant protein contains the Coronavirus 2019 CoV-2 Spike Glycoprotein S2, Wuhan-Hu-1 strain, 685-1211 amino acids, having a Mw of 60.1 kDa and fused to 6xHis tag at C-terminal.
