Description

SH2 Domain-Containing Leukocyte Protein Of 76 KDa (SLP-76) is an adaptor protein that plays a role in signal transduction in T cells. Studies using a SLP-76-deficient T cell line have demonstrated that SLP-76 is required for optimal phosphorylation and activation of both PLCg1 and the Ras pathway. SLP-76 phosphorylation is mediated by Zap70 upon TCR stimulation. Within an N-terminal acidic region, SLP-76 possesses three tyrosines (Tyr113, 128, and 145), which are phosphorylated upon activation. The sterile alpha-motif (SAM) domain of SLP-76 drives formation of dimers and higher order oligomers. SLP-76 micro-clusters at the immunological synapse enhance signal transduction and T cell activation.

Application Note

For flow cytometric staining, the suggested use of this reagent is 5 $\tilde{A} \square \hat{A} \mu L$ per million cells or 5 $\tilde{A} \square \hat{A} \mu L$ per 100 $\tilde{A} \square \hat{A} \mu L$ of staining volume. It is recommended that the reagent be titrated for optimal performance for each application.
