### Description

Source: Sf9, Insect cells.

Sterile filtered colorless solution.

Activin A Receptor Type II-Like 1, also known as ACVRL1 is a membrane-anchored proteoglycan which his core protein binds TGFf3 and has a short cytoplasmic domain with no discernible signaling structure. Furthermore, ACVRL1 shares similar domain structures with other closely related ALK or activin receptor-like kinase proteins which form a subfamily of receptor serine/threonine kinases.

ACVRL1 produced in Sf9 Insect cells is a single, glycosylated polypeptide chain containing 103 amino acids (22-118a.a.) and having a molecular mass of 11.5kDa. (Molecular size on SDS-PAGE will appear at approximately 18-28kDa).ACVRL1 is expressed with a 6 amino acid His tag at C-Terminus and purified by proprietary chromatographic techniques.
