### Description

Source: Escherichia Coli.

Sterile filtered colorless solution.

IL1B or Interleukin-1b is made and produced by activated macrophages, IL-1B stimulates thymocyte proliferation by inducing il-2 release, b-cell maturation and proliferation, and fibroblast growth factor activity. IL1B proteins take part in the inflammatory response, being identified as endogenous pyrogens, and are reported to stimulate the release of prostaglandin from synovial cells.

IL1B Canine Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 153 amino acids (114-265 a.a) and having a molecular mass of 17.5 kDa.
