

32-6627: Procalcitonin Rat

Alternative Name : Calcitonin, Calca, Calc.

Description

Source: Escherichia Coli.

Filtered White lyophilized (freeze-dried) powder.

Procalcitonin is a peptide hormone mainly produced by the C cells of the thyroid and certain endocrine cells of the lung. Under normal expression conditions, procalcitonin is immediately cleaved into three specific fragments, an N terminal residue, calcitonin and katalcalcin. Levels of unprocessed procalcitonin rise significantly after bacterial infection, trauma or shock.

Procalcitonin Rat Recombinant produced in E.Coli is a single, non-glycosylated, polypeptide chain (Val26-Asn136) containing 121 amino acids including a 10 aa His tag at N-terminus. The total calculated molecular mass is 13.6kDa.

Product Info

| | |
|----------------------------|---|
| Amount : | 2 µg / 10 µg |
| Purification : | Greater than 95.0% as determined by SDS-PAGE. |
| Content : | Procalcitonin was filtered (0.4µm) and lyophilized in 20mM TRIS and 50mM NaCl, pH 8.0. It is recommended to add deionized water to prepare a working stock solution of approximately 0.5 mg/ml and let the lyophilized pellet dissolve completely. Procalcitonin is not sterile! Please filter the product by an appropriate sterile filter before using it in the cell culture. |
| Storage condition : | Store lyophilized protein at -20°C. Aliquot the product after reconstitution to avoid repeated freezing/thawing cycles. Reconstituted protein can be stored at 4°C for a limited period of time; it does not show any change after two weeks at 4°C. |
