### Description

Source: Escherichia Coli.

Sterile Filtered colorless solution.

Aldo-keto reductase family 1 member C3 isoform 1 or AKR1C3 is an enzyme, part of the aldo-keto reductase family that promotes conversion of ketones & aldehydes to the alcohol forms while using cofactors such as NADPH & NADH. AKR1C3 promotes the reduction of PG molecule (prostaglandin), PQ (phenanthrenequinone) & PGH2. Another role is oxidation of 9 alpha, 11 beta-PGF2 to PGD2. AKR1C3 holds a crucial part in the pathogenesis of allergic diseases like asthma and can also take part in the regulation of cell growth and differentiation.

AKR1C3 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 323 amino acids (1-323) and having a molecular mass of 36.8 kDa. AKR1C3 is purified by proprietary chromatographic techniques.

### Application Note

Specific activity is > 1,000pmol/min/ug. It is defined by the amount of enzyme that catalyzes oxidation of 1.0pmole 1-Acenaphthenol in the presence of NADP per minute at pH 8.8 at 25±0.5°C.
