

32-6668: ARSA Human, SF9

Application : Functional Assay

Alternative Name : Arylsulfatase A, Cerebrosidase-Sulfatase, ASA, Metachromatic Leucodystrophy, MLD, EC 3.1.6.8.

Description

Source: Sf9, Baculovirus cells.

Sterile Filtered clear solution.

The enzyme Arylsulfatase A, also known as cerebrosidase-sulfatase, is responsible to break down sulfatides. The main molecule that Arylsulfatase A breaks down is cerebrosidase 3-sulfate into cerebrosidase and sulfate. The enzyme is encoded by the ARSA gene in humans. Phosphate can form a covalent bond with the Arylsulfatase A's active site 3-oxoalanine, thus, inhibits the protein.

ARSA produced in Sf9 Baculovirus cells is a single, glycosylated polypeptide chain containing 498 amino acids (21-509a.a.) and having a molecular mass of 53.0kDa. (Molecular size on SDS-PAGE will appear at approximately 50-70kDa). ARSA is expressed with a 9 amino acid His tag at C-Terminus and purified by proprietary chromatographic techniques.

Product Info

Amount : 1 µg / 5 µg

Purification : Greater than 95.0% as determined by SDS-PAGE.

Content : ARSA protein solution (0.25mg/ml) contains Phosphate Buffered Saline (pH 7.4) and 10% glycerol.

Storage condition : Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.

Application Note

Specific activity is > 2,500 pmol/min/ug, and defined as the amount of enzyme that hydrolyze 4-Nitrocatechol at pH 5.0 at 37C.
