

32-13171: CRYGD Mouse

Alternative Name : Gamma-crystallin D, Gamma-D-crystallin , Gamma-crystallin 1, CRYGD.

Description

Source: Escherichia Coli.

Sterile filtered colorless solution.

CRYGD is a member of the beta/gamma-crystallin family. Crystallins are the principal structural components of the vertebrate eye lens. The mammalian lens crystallins are divided into alpha, beta, and gamma families. Gamma-crystallins are involved in cataract formation. Defects in the CRYGD gene are responsible for cataract autosomal dominant (ADC), cataract congenital non-nuclear polymorphic autosomal dominant (CCP), cataract congenital cerulean type 3 (CCA3) and cataract crystalline aculeiform (CACA).

CRYGD Mouse Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 197 amino acids (1-174 a.a.) and having a molecular mass of 23.5kDa. CRYGD is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques.
