## Description

Source: Sf9, Baculovirus cells.
Sterile filtered colorless solution.
Ectodysplasin A Receptor, also known as EDAR belongs to the tumor necrosis factorÂ receptor family. EDAR is a receptor for the soluble ligand ectodysplasin A, and is capable of activating the nuclear factor-kappaB, JNK, as well as caspaseindependent cell death pathways. EDAR is necessary for the development of hair, teeth, and other ectodermal derivatives. Furthermore, mutations in EDAR resulted in autosomal dominant and recessive forms of hypohidrotic ectodermal dysplasia. EDAR produced in Sf9 Baculovirus cells is a single, glycosylated polypeptide chain containing 413 amino acids (27-187a.a.) and having a molecular mass of 45.6 kDa . (Molecular size on SDS-PAGE will appear at approximately $40-57 \mathrm{kDa}$ ).EDAR is expressed with a 249 amino acid hlgG-His-tag at C-Terminus and purified by proprietary chromatographic techniques.
