32-13463: SUMF1 Human, Sf9

Alternative Name : SUMF1, AAPA3037, FGE, UNQ3037, Formylglycine-generating enzyme, C-alpha-formylglycine-generating enzyme 1, Sulfatase-modifying factor 1.

Description

Source: Sf9, Insect cells.

Sterile Filtered colorless solution.

SUMF1 is a part of the SUMF protein family. SUMF1 catalyzes the hydrolysis of sulfate esters by oxidizing a cysteine residue in the substrate sulfatase to an active site 3-oxoalanine residue called C-alpha-formylglycine. Mutations in this gene will cause multiple sulfatase deficiency meaning a lysosomal storage disorder.

SUMF1 produced in Sf9 Insect cells is a single, glycosylated polypeptide chain containing 347 amino acids (34-374.a.) and having a molecular mass of 38.1kDa (Molecular size on SDS-PAGE will appear at approximately 40-57kDa). SUMF1 is expressed with a 6 amino acid His tag at C-Terminus and purified by proprietary chromatographic techniques.
