

32-17066: Recombinant human SELP protein with C-terminal human Fc tag

Alternative Name : P-Selectin,CD62P,SELP,GMP-140

Description

Expression Host : HEK293

The protein has a predicted molecular mass of 106.1 kDa after removal of the signal peptide. The apparent molecular mass of SELP-hFc is approximately 130-150 kDa due to glycosylation.

This gene encodes a 140 kDa protein that is stored in the alpha-granules of platelets and Weibel-Palade bodies of endothelial cells. This protein redistributes to the plasma membrane during platelet activation and degranulation and mediates the interaction of activated endothelial cells or platelets with leukocytes. The membrane protein is a calcium-dependent receptor that binds to sialylated forms of Lewis blood group carbohydrate antigens on neutrophils and monocytes. Alternative splice variants may occur but are not well documented.

Product Info

Amount :	50 µg
Purification :	The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.
Content :	Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8 % trehalose is added as protectants before lyophilization.
Storage condition :	Store at -80°C for 12 months (Avoid repeated freezing and thawing)
