

## 32-17082: Recombinant human CD34 protein with C-terminal 6 $\times$ His tag

**Alternative Name :** CD34 Molecule

### Description

Expression Host : HEK293

The protein has a predicted molecular mass of 28.3 kDa after removal of the signal peptide.

The protein encoded by this gene may play a role in the attachment of stem cells to the bone marrow extracellular matrix or to stromal cells. This single-pass membrane protein is highly glycosylated and phosphorylated by protein kinase C. Two transcript variants encoding different isoforms have been found for this gene.
