

## 32-17246: Recombinant human IL1R3 protein with C-terminal human Fc tag

**Alternative Name :** C3orf13,IL-1RAcP,IL1R3

### Description

Expression Host : HEK293

The protein has a predicted molecular mass of 73.7 kDa after removal of the signal peptide.

This gene encodes a component of the interleukin 1 receptor complex, which initiates signalling events that result in the activation of interleukin 1-responsive genes. Alternative splicing of this gene results in membrane-bound and soluble isoforms differing in their C-terminus. The ratio of soluble to membrane-bound forms increases during acute-phase induction or stress.
