

30-2624: Anti-Human CD205 APC (Clone : HD30)

Clonality :	Monoclonal
Clone Name :	HD30
Application :	FACS
Reactivity :	Human
Conjugate :	APC
Gene :	LY75
Gene ID :	4065
Alternative Name :	DEC-205, LY75, CLEC13B, lymphocyte antigen 75
Isotype :	Mouse IgG1 kappa
Immunogen Information :	Recombinant Fc-tagged human CD205

Description

CD205, also known as DEC-205, is an endocytic receptor of macrophage mannose receptor family. This 205 kDa C-type lectin transmembrane protein mediates adsorptive uptake and its intracellular domain contains coated pit localization sequence and distal acidic motif, which is required for recycling beyond early endosomes through deeper MHC II+ late endosomes and lysosomes. This unique pathway of receptor-mediated uptake proves to be necessary for presentation of antigenic peptides at low doses of ligand. CD205 is responsible for uptake and processing of captured antigens for dendritic cells.

Specificity : The mouse monoclonal antibody HD30 recognizes an extracellular epitope of CD205, an approx. 200 kDa C-type lectin transmembrane protein of the MMR (macrophage mannose receptor) family, expressed at high levels on dendritic cells and thymic epithelial cells, and at low levels on lymphocytes, NK cells and monocytes.

Product Info

Amount :	100 tests
Purification :	The purified antibody is conjugated with allophycocyanin (APC) under optimum conditions. The conjugate is purified by size-exclusion chromatography.
Content :	Formulation : Stabilizing phosphate buffered saline (PBS) solution containing 15 mM sodium azide
Storage condition :	Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light.

Application Note

Flow cytometry: The reagent is designed for analysis of human blood cells using 10 μ l reagent / 100 μ l of whole blood or 10^6 cells in a suspension. The content of a vial (1 ml) is sufficient for 100 tests.

Figure 1 : Flow cytometry surface staining pattern of human peripheral whole blood stained using anti-human CD205 (HD30) APC antibody (4 μ l reagent / 100 μ l of peripheral whole blood).

Figure 2 : Separation of human monocytes (red-filled) from lymphocytes (black-dashed) in flow cytometry analysis (surface staining) of human peripheral whole blood stained using anti-human CD205 (HD30) APC antibody (4 μ l reagent / 100 μ l of peripheral whole blood).
