30-2631: Anti-Human CD172b PE (Clone : B4B6)

| Clonality : | Monoclonal |
|-----------------------|---|
| Clone Name : | B4B6 |
| Application : | FACS |
| Reactivity : | Human |
| Conjugate : | PE |
| Gene : | SIRPB1 |
| Gene ID : | 10326 |
| Alternative Name : | SIRPB1, signal regulatory protein beta 1 |
| Isotype : | Mouse IgG1 |
| Immunogen Information | NIH-3T3 cells transfected with human CD172b |

Description

CD172b, the signal-regulatory protein beta (SIRP beta) is a disulfide-linked homodimer expressed on myeloid cells including monocytes and dendritic cells. Similarly to CD172a, it serves as a negative regulator of tyrosine kinase-coupled signaling processes. Unlike CD172a, the CD172b protein does not possess the cytoplasmic domain, but instead its transmembrane domain can interact with another transmembrane protein DAP-12, which contains ITAM sequences in its intracellular domain and links CD172b to the downstream signaling molecules. The result is e.g. regulation of neutrophil transepithelial migration. Specificity : The mouse monoclonal antibody B4B6 recognizes an extracellular epitope of CD172b, an approximately 50 kDa transmembrane glycoprotein expressed on myeloid cells.

Product Info

| Amount : | 100 tests |
|---------------------|---|
| Purification : | The purified antibody is conjugated with R-phycoerythrin (PE) under optimum conditions. The conjugate is purified by size-exclusion chromatography. |
| Content : | Formulation : Stabilizing phosphate buffered saline (PBS) solution containing 15 mM sodium azide |
| Storage condition : | Store in the dark at 2-8°C. Do not freeze. Avoid prolonged exposure to light. |

Application Note

Flow cytometry: The reagent is designed for analysis of human blood cells using 10 \tilde{A} $\hat{A}\mu$ reagent / 100 \tilde{A} $\hat{A}\mu$ of whole blood or 10⁶ cells in a suspension. The content of a vial (1 ml) is sufficient for 100 tests.

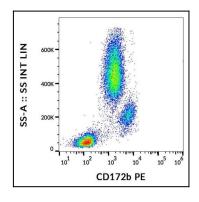

Figure 1 : Flow cytometry analysis (surface staining) of human peripheral blood cells with anti-human CD172b (B4B6) PE.
