Description

Source: Escherichia Coli.

Physical Appearance: Sterile Filtered colorless solution.

Biological Activity: null

Casein Kinase 2 beta (CSNK2B) is a ubiquitous Ser/Thr kinase expressed in all eukaryotes. CSNK2B is a tetramer comprised of 2 catalytic kinase domains, alpha subunits and 2 identical regulatory beta subunits. CSNK2B takes part in cell cycle control, DNA repair, regulation of the circadian rhythm and other cellular processes. The beta subunit itself confers stability to the CK2 alpha subunit and is involved in activity and substrate specificity but does not have kinase activity.

CSNK2B Human Recombinant produced in E. Coli is a single, non-glycosylated polypeptide chain containing 215 amino acids (1-215 a.a) and having a molecular mass of 24.9 kDa. CSNK2B is purified by proprietary chromatographic techniques.
