

32-13712: ALCAM (CD166) Mouse

Format : ALCAM protein solution (0.25mg/ml) contains 50% glycerol and Phosphate-Buffered Saline (pH 7.4).

Alternative Name : Activated leukocyte cell adhesion molecule, ALCAM, Alcam, CD166 antigen, CD166 antigen isoform1, CD166, Protein DM-GRASP, AI853494 Protein, MuSC, SC1, BEN.

Description

Source:Sf9, Baculovirus cells.

Physical Appearance:Sterile filtered colorless solution.

Biological ActivityMeasured by its ability to block the adhesion of Jurkat human acute T cell leukemia cells to immobilized Recombinant Human CD6. When cells are added to 1 ug/ml of mouse ALCAM binded to CD6, this effect is more to 50%.

CD166 antigen isoform 2 (ALCAM) is a type 1 membrane glycoprotein and belongs to the immunoglobulin superfamily. ALCAM is expressed on thymic epithelium, microvascular endothelium, activated lymphocytes and monocytes, and monocyte-derived dendritic cells. CD166 and CD6 interaction plays a role in T cell development and T cell regulation, as well as in the binding of T cells and B cells to activated leukocytes.

ALCAM mouse produced in Sf9 Baculovirus cells is a single, glycosylated polypeptide chain containing 739 amino acids (28-527a.a.) and having a molecular mass of 83.1kDa. ALCAM is expressed with a 239 amino acid hlgG-His-Tag at C-Terminus and purified by proprietary chromatographic techniques.

Product Info

Amount : 10 µg / 2 µg

Purification : Greater than 90.0% as determined by SDS-PAGE.

Storage condition : Store at 4°C if entire vial will be used within 2-4 weeks.Store, frozen at -20°C for longer periods of time.For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA).Avoid multiple freeze-thaw cycles.
