

## 32-13799: SHBG Protein

<b>Format :</b>	The protein is supplied in 0.01M HEPES, PH 7.4 and 0.15M NaCl.
<b>Alternative Name :</b>	Sex hormone-binding globulin, SHBG, Sex steroid-binding protein, SBP, Testis-specific androgen-binding protein, ABP, Testosterone-estradiol-binding globulin, TeBG, Testosterone-estrogen-binding globulin, SHBG.

### Description

Source: Human serum.

Physical Appearance: Sterile filtered colorless solution.

Biological Activity: null

Sex-hormone-binding globulin (SHBG) is a beta-globulin which specifically binds steroid hormones; it is involved in the transport of sex steroids in plasma. The main site of SHBG synthesis is assumed to be the hepatocytes. The production of SHBG is regulated by androgen/estrogen balance, thyroid hormones, insulin and dietary factors, among others. The concentration of SHBG is a key factor regulating their distribution between protein-bound and free states. SHBG concentration determination is primarily significant in the evaluation of mild disorders of androgen metabolism and it allows detection of women with hirsutism who are likely to react to estrogen therapy. Testosterone/SHBG-ratios correlate well with both measured and calculated values for free testosterone thus aid to distinguish between subjects with excessive androgen activity and normal individuals. SHBG gene polymorphisms are linked with polycystic ovary syndrome and type 2 diabetes mellitus.

SHBG is a protein of approximately 45kD.

### Product Info

<b>Amount :</b>	100 µg / 20 µg
<b>Purification :</b>	null
<b>Storage condition :</b>	Upon arrival, Store at -20°C. Please prevent freeze-thaw cycles.
