

**32-13847: ASFV P30****Description**

Source: Escherichia Coli.

Physical Appearance: Sterile Filtered colorless solution.

Biological Activity: null

African swine fever virus (ASFV) causes African swine fever (ASF), a disease of swine characterized by high morbidity and mortality. ASFV is a large DNA virus which belongs to Asfarviridae family. ASFV's multilayered virion consists from up to 54 polypeptides while p30 is one of the early viral proteins. ASFV P30 is encoded by the CP204L gene and is one of the most antigenic structural proteins involved in ASFV entry.

Recombinant African Swine Fever Virus P30 produced in E. coli containing 194 amino acids (40-315 aa) and having a Mw of 22kDa. Recombinant African Swine Fever Virus P30 is fused to a 6xHis tag and purified by proprietary chromatographic technique.

**Product Info**

**Amount :** 0.5 mg / 100 µg

**Purification :** Protein is >90% pure as determined by 10% PAGE (coomassie staining).

**Storage condition :** Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.
