### Description

TROP2 is a cell surface receptor that transduces calcium signals. It belongs to carcinoma-associated antigens. Mutations of TROP2 have been associated with gelatinous drop-like corneal dystrophy.

Specificity :The mouse monoclonal antibody TrMab-6 recognizes an extracellular epitope of TROP2, a type I transmembrane glycoprotein. This antibody is useful for detection of TROP2 in breast cancer.

Figure 2: Immunocytochemistry staining of TROP2 on the surface of unfixed wild-type and TROP2-overexpressing MDA-MB-231 cells using mouse monoclonal antibody TrMab-6 (1  $\mu$ g/ml), detected with GAM IgG-Alexa Fluor®488 (diluted 1:1000, green); isotype control IgG2b was used as the negative control. DNA stained with DAPI (blue)

Positive in basolateral parts of airway epithelium. Negative control was stained without primary antibody- Scale bar represents 100  $\mu$ m.
