Description

CD66c is a GPI-anchored glycoprotein capable of homophilic adhesion and heterophilic binding to CD66a-e, CD62E, and galectins. It is expressed on granulocytes and epithelial cells, and has potential applications in the detection of sites of infection and inflammation.

Specificity : The mouse monoclonal antibody B6.2 recognizes a conformationally dependent epitope of native CD66c, a GPI-anchored extracellular glycoprotein expressed on granulocytes and epithelial cells.
