

30-2894: Anti-CD325 PE Mab(8C11)

Clonality :	Monoclonal
Clone Name :	8C11
Application :	FACS
Reactivity :	Human
Conjugate :	PE
Gene ID :	1000
Uniprot ID :	P19022
Alternative Name :	N-Cadherin, cadherin 2, CDHM, CDH2
Isotype :	Mouse IgG1
Immunogen Information :	Purified human IgE.

Description

Specificity: The mouse monoclonal antibody 4H10 reacts with human IgE; it recognizes an epitope different from the ones recognized by BE5 and 4G7 antibodies to IgE. The epitope is located within the amino acids 267-279 (TWLEDGQVMDVDL).

Immunoglobulin E (IgE) is a 180 kDa soluble protein serving as an antigen-specific unit of mast cell effector mechanisms. IgE has the lowest serum concentration of all immunoglobulins (approximately 0.5 mg/l) in healthy individuals, but upon allergen challenge its concentration in blood increases dramatically. Although biological survival of free IgE is very short ($T_{1/2} = 2$ days), it is stabilized after binding to its high affinity receptor. Unlike IgM- IgG- and IgA-committed B cells, IgE-switched B cells do not undergo clonal expansion.

Product Info

Amount :	0.1 mg
Purification :	Purified antibody is conjugated with R-phycoerythrin (PE) under optimum conditions. Unconjugated antibody and free fluorochrome are removed by size-exclusion chromatography.
Content :	Formulation : Stabilizing phosphate buffered saline (PBS), pH 7.4, 15 mM sodium azide
Storage condition :	Store at 2-8°C. Protect from prolonged exposure to light. Do not freeze.

Application Note

Flow cytometry: Recommended dilution: 1-5 $\mu\text{g/ml}$.

Figure 1: Separation of HeLa cells stained using anti-human CD325 (8C11) PE antibody (10 μl reagent per million cells in 100 μl of cell suspension, red-filled) from HeLa cells stained using mouse IgG1 isotype control (MOPC-21) PE antibody (concentration in sample 5 $\mu\text{g/ml}$, same as CD325 APC concentration, black-dashed) in flow cytometry analysis (surface staining).
