

32-17646: Recombinant Human CD93 Protein, mFc Tag

Uniprot ID : Q9NPY3
Alternative Name : C1qR, C1qR(p), C1qRp, CDw93

Description

Molecular Characterization: CD93(Thr22-Lys580) mFc(Pro99-Lys330)

Molecular weight: The protein has a predicted molecular mass of 84.5 kDa after removal of the signal peptide. The apparent molecular mass of CD93-mFc is approximately 100-130 kDa due to glycosylation.

Description: Recombinant human CD93 Protein with C-terminal Mouse Fc tag

The protein encoded by this gene is a cell-surface glycoprotein and type I membrane protein that was originally identified as a myeloid cell-specific marker. The encoded protein was once thought to be a receptor for C1q, but now is thought to instead be involved in intercellular adhesion and in the clearance of apoptotic cells. The intracellular cytoplasmic tail of this protein has been found to interact with moesin, a protein known to play a role in linking transmembrane proteins to the cytoskeleton and in the remodelling of the cytoskeleton.

Product Info

Amount : 100 µg / 50 µg
Content : Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.
Storage condition : Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
