

## 32-17833: Recombinant Human CXCR7 Protein, hFc Tag

**Uniprot ID :** P25106

**Alternative Name :** Atypical chemokine receptor 3,CXC-R7,CXCR-7,Chemokine orphan receptor 1,G-protein coupled receptor 159,RDC-1

### Description

Molecular Characterization: CXCR7(Met1-Lys40) hFc(Glu99-Ala330)

Molecular weight: The protein has a predicted molecular mass of 31.0 kDa after removal of the signal peptide. The apparent molecular mass of CXCR7-hFc is approximately 35-55 kDa due to glycosylation.

Description: Recombinant human CXCR7 protein with C-terminal human Fc tag

This gene encodes a member of the G-protein coupled receptor family. Although this protein was earlier thought to be a receptor for vasoactive intestinal peptide (VIP), it is now considered to be an orphan receptor, in that its endogenous ligand has not been identified. The protein is also a coreceptor for human immunodeficiency viruses (HIV). Translocations involving this gene and HMGA2 on chromosome 12 have been observed in lipomas.

### Product Info

**Amount :** 100 µg / 50 µg

**Content :** Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.

**Storage condition :** Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
