

32-17841: Recombinant Human CD235A Protein, hFc Tag

Uniprot ID : P02724

Alternative Name : Glycophorin-A, CD235a, PAS-2, GYPA, GPA

Description

Molecular Characterization: CD235A(His28-Glu91) hFc(Glu99-Ala330)

Molecular weight: The protein has a predicted molecular mass of 33.3 kDa after removal of the signal peptide. The apparent molecular mass of CD235A-hFc is approximately 35-55 kDa due to glycosylation.

Description: Recombinant human CD235A protein with C-terminal human Fc tag

Glycophorins A (GYPA) and B (GYPB) are major sialoglycoproteins of the human erythrocyte membrane which bear the antigenic determinants for the MN and Ss blood groups. In addition to the M or N and S or s antigens that commonly occur in all populations, about 40 related variant phenotypes have been identified. These variants include all the variants of the Miltenberger complex and several isoforms of Sta, as well as Dantu, Sat, He, Mg, and deletion variants Ena, S-s-U- and Mk. Most of the variants are the result of gene recombinations between GYPA and GYPB.

Product Info

Amount : 100 µg / 50 µg

Content : Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.

Storage condition : Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
