

32-17866: Recombinant Human MDK Protein, hFc Tag

Uniprot ID : P21741

Alternative Name : Midkine?MK?ARAP?Midgestation and kidney protein?Neurite outgrowth-promoting factor 2?Neurite outgrowth-promoting protein

Description

Molecular Characterization: MDK(Val21-Asp143) hFc(Glu99-Ala330)

Molecular weight: The protein has a predicted molecular mass of 39.6 kDa after removal of the signal peptide. The apparent molecular mass of MDK-hFc is approximately 35-55 kDa due to glycosylation.

Description: Recombinant human MDK protein with C-terminal human Fc tag

This gene encodes a member of a small family of secreted growth factors that binds heparin and responds to retinoic acid. The encoded protein promotes cell growth, migration, and angiogenesis, in particular during tumorigenesis. This gene has been targeted as a therapeutic for a variety of different disorders. Alternatively spliced transcript variants encoding multiple isoforms have been observed.

Product Info

Amount : 100 µg / 50 µg

Content : Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.

Storage condition : Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).
Lyophilized proteins are shipped at ambient temperature.
