32-17900: Recombinant Human FGF21 Protein, hFc Tag

Uniprot ID: Q9NSA1

Alternative Name: Fibroblast growth factor 21, FGF-21

Description

Molecular Characterization: FGF21(His29-Ser209) hFc(Glu99-Ala330)

Molecular weight: The protein has a predicted molecular mass of 45.5 kDa after removal of the signal peptide. The apparent molecular mass of FGF21-hFc is approximately 40-55 kDa due to glycosylation.

Description: Recombinant human FGF21 protein with C-terminal human Fc tag

Theis gene encodes a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities and are involved in a variety of biological processes. This protein is a secreted endocrine factor that functions as a major metabolic regulator. The encoded protein stimulates the uptake of glucose in adipose tissue.

Product Info

Amount : $100 \mu g / 50 \mu g$

Content: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before

lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended

Storage condition: for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.
