

32-17986: Recombinant Human AREG Protein, hFc Tag

Uniprot ID : P15514

Alternative Name : AR; CRDGF; AREGB; SDGF

Description

Molecular Characterization: AREG(Ser20-Lys187) hFc(Glu99-Ala330)

Molecular weight: The protein has a predicted molecular mass of 44.9 kDa after removal of the signal peptide. The apparent molecular mass of AREG-hFc is approximately 53-70 kDa due to glycosylation.

Description: Recombinant human AREG protein with C-terminal human Fc tag

The protein encoded by this gene is a member of the epidermal growth factor family. It is an autocrine growth factor as well as a mitogen for astrocytes, Schwann cells and fibroblasts. It is related to epidermal growth factor (EGF) and transforming growth factor alpha (TGF-alpha). The protein interacts with the EGF/TGF-alpha receptor to promote the growth of normal epithelial cells, and it inhibits the growth of certain aggressive carcinoma cell lines. It also functions in mammary gland, oocyte and bone tissue development. This gene is associated with a psoriasis-like skin phenotype, and is also associated with other pathological disorders, including various types of cancers and inflammatory conditions.

Product Info

Amount : 100 µg / 50 µg

Content : Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.

Storage condition : Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).
Lyophilized proteins are shipped at ambient temperature.
