

32-18250: Human SFRP2 Protein, His Tag

Uniprot ID : Q96HF1
Alternative Name : FRP-2;SARP1;SDF-5

Description

Description : Recombinant human SFRP2 protein with C-terminal 6×His tag

Background : This gene encodes a member of the SFRP family that contains a cysteine-rich domain homologous to the putative Wnt-binding site of Frizzled proteins. SFRPs act as soluble modulators of Wnt signaling. Methylation of this gene is a potential marker for the presence of colorectal cancer.

Molecular Characterization: mass of 31.9 kDa after removal of the signal peptide.

Tag : C-6×His Tag

Product Info

Amount : 50 µg / 100 µg

Purification : The purity of the protein is greater than 90% as determined by SDS-PAGE and Coomassie blue staining.

Content : Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.

Storage condition : Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
