

32-18271: Human DSG2(24-609) Protein, His Tag

Uniprot ID : Q14126
Alternative Name : CDHF5;HDGC

Description

Description : Recombinant Human DSG2(24-609) Protein with C-terminal 6×His tag

Background : This gene encodes a member of the desmoglein family and cadherin cell adhesion molecule superfamily of proteins. Desmogleins are calcium-binding transmembrane glycoprotein components of desmosomes, cell-cell junctions between epithelial, myocardial, and other cell types. The encoded preproprotein is proteolytically processed to generate the mature glycoprotein. This gene is present in a gene cluster with other desmoglein gene family members on chromosome 18. Mutations in this gene have been associated with arrhythmogenic right ventricular dysplasia, familial, 10.

Molecular Characterization: mass of 66.4 kDa after removal of the signal peptide. The apparent molecular mass of DSG2(24-609)-His is approximately 70-100 kDa due to glycosylation.

Tag : C-6×His Tag

Product Info

Amount : 50 µg / 100 µg

Purification : The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue staining.

Content : Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before lyophilization.

Storage condition : Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
