32-18285: Human MELTF Protein, His Tag

Uniprot ID: P08582

Alternative Name: CD228;MAP97;MFI2;MTf;MTF1

Description

Description :Recombinant Human MELTF Protein with C-terminal 6XHis tag

Background: The protein encoded by this gene is a cell-surface glycoprotein found on melanoma cells. The protein shares sequence similarity and iron-binding properties with members of the transferrin superfamily. The importance of the iron binding function has not yet been identified. This gene resides in the same region of chromosome 3 as members of the transferrin superfamily. Alternative splicing results in two transcript variants.

Molecular Characterization: mass of 76.2 kDa after removal of the signal peptide. The apparent molecular mass of MELTF-His is approximately 70-100 kDa due to glycosylation.

Tag: C-6×His Tag

Product Info

Amount: 50 μg / 100 μg

Purification: The purity of the protein is greater than 85% as determined by SDS-PAGE and Coomassie blue

staining.

Content: Lyophilized from sterile PBS, pH 7.4. Normally 5 % - 8% trehalose is added as protectants before

lyophilization.

Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended

Storage condition: for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing).

Lyophilized proteins are shipped at ambient temperature.
